For some reason, an NT domain user is unable to see views in Access ADP. But she can see the tables no problem. Is there a known issue with views? She does have select permissions on the tables that underlie the view. Thanks in advance for information or suggestions.

Timo

We're using SQL Server 2000 and Windows Server 2003 with Active Directory. The connection string is using Integrated Security::

```
"Provider=sqloledb;Data Source=server1;Initial Catalog=ABC;Integrated Security=SSPI;OLE DB Services=-2;"
```

Here are the steps I've taken with user permissions:

```
exec sp_grantlogin [OURDOMAIN\user99]
exec sp_grantdbaccess [OURDOMAIN\user99], 'SARAH'
```

```
exec sp_addrole 'TheRole'
exec sp_addrolemember 'TheRole', 'SARAH'
```

```
create view TestView
as select * from table1
inner join table2
on t1.id = t2.anotherid
```

```
grant select on table1 to TheRole
grant select on table2 to TheRole
grant select on TestView to TheRole
```

Database user SARAH can see the tables but not the view.

.
