-

I am about to start developing a multiuser application using SQL-server and ACCESS FRONT-ends.

A friend of mine who is familiar in Dot.Net programming is advicing me not to use ACCESS. (He thinks that a performance of SQL server is seriously diminishing if there are more ACCESS Front Ends Connections to the server !?)

—
My question is:

If I am familiar in ACCESS and can do anything with it Is there any reason why I shouldn't use ACCESS but Dot.Net.
