aaron.kempf@xxxxxxxxxxx wrote:

```
CREATE TABLE OrgChart (  
  employeeID INTEGER NOT NULL UNIQUE,  
  manager_employeeID INTEGER  
  REFERENCES OrgChart (employeeID)  
  ON DELETE SET NULL  
  ON UPDATE CASCADE);
```

wouldn't work in SQL Server since I don't have a table named OrgChart

Try reading that again (hint: CREATE TABLE OrgChart...?)

how about this.. Right-Click CREATE SCRIPT for all your MDB tables and queries LoL

Have you seen the code it writes: proprietary syntax, weird casing, peppered with parens and brackets, ...yuk! I have my own tool that works on both Jet and SQL Server, SQL-92 standard syntax where possible, SQL keywords in uppercase, etc. Lovely.

dude what about when you need to split your backend into multiple files because you get a single table that is approaching 1gb?

I can assure you, sir, my backend does not require splitting. ROFL.

Jamie.
