Hi,

I'm trying to set up a separate ADO connection for a form's recordset.

I've used the example in KB /281998, but am getting above error message at the point of the .Open method.

Can anyone spot what I am doing wrong?

Note: The application first opens with the following connection: It is the separate ADO connection for a form that I'm having trouble with, even though I used the same connection values as in connct string below.

```
:Provider=Microsoft.Access.OLEDB.10.0;Persist Security Info=True;Data Source=GRAPEVINE2;Integrated Security=SSPI;Initial Catalog=Marketing;Data Provider=SQLOLEDB.1
```

Thanks.

Alan

Code for separate Form connection in OnOpen event

```
-----  
Private Sub Form_Open(Cancel As Integer)  
Dim cnn As ADODB.Connection  
Dim rst As ADODB.Recordset  
  
'Create a new ADO Connection object  
Set cnn = New ADODB.Connection  
  
'Use the Access 10 and SQL Server OLEDB providerst to  
'open the Connection  
With cnn  
.Provider = "Microsoft.Access.OLEDB.10.0"  
.Properties("Data Provider").Value = "SQLOLEDB"  
.Properties("Data Source").Value = "GRAPEVINE2"  
.Properties("Persist Security Info").Value = "True"
```

Data Provider Could Not Be Initialized

```
.Properties("Integrated Security").Value = "SPPI"  
.Properties("Initial Catalog").Value = "Marketing"  
.Open  
End With  
  
'Create an instance of the ADO Recordset class, and  
'set its properties  
Set rst = New ADODB.Recordset  
With rst  
Set .ActiveConnection = cnn  
.Source = ("SELECT * FROM dbo.tblCalculationResults")  
' .LockType = adLockOptimistic  
' .CurstorType = adOpenKeyset  
.Open  
End With  
  
'Set the form's Recordset property to the ADO recordset  
Set Me.Recordset = rst  
Set rst = Nothing  
Set cnn = Nothing  
  
End Sub  
  
.
```
