hello all

im noobest ssme user here. I am trying to export my access backend database into sql server express 2005 by using the upsizing wizardi go to create new database option and click on trusted connection and when i hit next it gives me a microsoft sql server login error:

connection failed:

SQLState: '01000'

SQL Server Error: 2

[Microsoft][ODBC SQL Server Driver][Shared Memory]ConnectionOpen (Connect()).

Connection failed:

SQLState: '08001'

SQL Server Error: 17

[Microsoft][ODBC SQL Server Driver][Shared Memory]SQL Server does not exist or access denied.

What is causing this? Should i be doing something else like configuring sql sever before upsizing. once again i am clueless and dont know where to start.

thanks in advance for your help.

.
