> I didn't know you judge the knowledge of people by their spelling in posts.

You mean "know" in that sentence (assuming English). You don't seem to know tenses, let alone spelling.

It is one indicator of their education, most certainly.

More important than qualifications, I would say.

If they can't spell, how the hell do programmers write code which requires exemplary spelling, bar nothing, for instance? If I was an employer (which fortunately I'm not) I would reject outright your application. Are you claiming you write exemplary grammar in code (thereby avoiding error messages) and not in posts or other verbal intercourse? How therefore, can we be assured you know what an integer means?

> I am sorry if i have dissapointed.

You have. Never mind, I realise it's only one indicator. Just try to do better is all I ask.

> Next to my 2 mother languages, croatian

> and dutch, english comes after french. Oh, and there is german too :(.

>

Well, that's a very good reason. I salute you. I never heard of someone having "TWO MOTHER LANGUAGES", which I imagine would require two mothers...:-) I've heard of confusion over fathers, but never mothers :-))))))

> just speculation. If you must know: I am a full time philosophy/physics

> student, and my hobby is informatics.

It's possible (though I don't know) that Brendan was just speculating that you needed a further understanding of integers. Otherwise you would not have needed to ask the question.

It was reasonably obvious (as I already intimated) that you were not a professional programmer like Brendon.

I couldn't care less who Brendan is. I just know that he's "cosher" and genuinely tries to help. Maybe he's wrong sometimes for all I know. That's all I can say with regard to the level of this thread, is that I don't like

Re: unsigned integer in MS Access

arguing with Brendan's knowledge.

Your post ("correction") wasn't really that bad, if we assume English isn't your Mother Tongue, and I myself tend to be abrupt and not "waste words".

Chris
