Hi,

Where is the database shared out, and what permissions are on the folder that its in. Make Sure, that users have read, write, edit and delete permissions at least, this is in order for the ldb file to be created when the database opens, and also is updated when users open it, and also is then deleted after the last user leaves the database.

hth

Mark

PS also make sure, that no user, is opening the database exclusively.
