Res.All,

I have made a package via the packaging wizard from office XP developer tool kit.

This setup program runs in one computer but gives the error message as is described above

The Office System Pack cannot be installed on this system because it requires Windows NT 4.0 Service Pack 6 or later.

You may receive error messages when you install an Access 2002 runtime deployment package on a computer that is running Windows XP SP2 or Windows Server 2003
