When I try to uninstall my "program" in settings, control panel, add/remove programs after deleting the package on the computer where I installed it, I get an error message something like that I cannot find themsi file so do I understand it correctly a user can never delete this package or will otherwise not be able to uninstall OR can I change the settings when setting up the package so this problem will not occur? (in case a user "cleans up" the install package)

Philip
