Theo: I've had several "weird" problems with Access and have learned that often a database can become "broken" and "repair and compact" under Tools does not fix it. I've had to create a new db and import all tables, queries, forms, reports, macros and modules. Similarly, a compile error in any module can have far reaching effects. Press Cntl-G to get to Visual Basic, Debug, and then compile database. Any compile errors will show up here. If that doesn't work, re-create the db. Good luck

Ray
