I tried running the first sample you referred me to (<http://www.mvps.org/access/modules/mdl006.htm>). No luck.

I set it up as a control button on a form in a sample database. When I clicked on the control button, I received an error message saying "Compile Error – Sub or Function not defined". Then it highlights the `Sub sTestXL_Click()` title.

Next I tried the following sample; (<http://support.microsoft.com/default.aspx?scid=kb:en-us;14276> Entitled Using Automation to Create and Manipulate an Excel Workbook) No luck here either. I set it up exactly as the sample showed. But I received an error saying "Compile Error – Variable not defined". Then it highlights the next to the last line of code which says `Text1.SetFocus`

Help please,

Jesse
