Hi Dick,

The previous images were embedded into you database when xxx program was installed on your computer that served as the OLE Server for (most likely JPG) files.

You'll probably need to reinstall Photo Editor, see: Microsoft Photo Editor Is Removed When You Install Office 2003

<http://support.microsoft.com/default.aspx?scid=kb;en-us;817095>

OR

Change the File Associations for whatever image file that displays as an icon, example:

- open windows explorer
- select Tool > Folder Options > Files Type
- select the correct extension for your image file
- change Opens with to the correct program

Note: I think your issue is going to be to reinstall Photo Editor

Eric

| I have a related problem. I have been embedding pictures
| in a field and display that field on a form using insert
| PhotoBase Document. Recently an icon rather than the
| picture is displayed on the form. This only happens with
| the new records; older records still display the
| picture. Any idea what my problem may be?
