I had to remove the ".xls" on the file names to use this.  
Access doesn't like period in table names. You might be able to trim that off. I hope this can help

This creates the tables with the same name as in the directory C:\testimport\ without the ".xls"

```
Private Sub Command0_Click()  
Dim filename As String  
filename = Dir("c:\testimport\*.*)"
```

```
Do Until filename = ""  
DoCmd.TransferSpreadsheet acImport, 8, filename,  
"c:\testimport\" & filename, True, ""  
filename = Dir  
Loop  
End Sub
```
