At a guess – and it's only a guess – the message means what it says: trying to run 204 queries at the same time is more than the ODBC driver can handle.

If you were running them from VBA I'd suggest including some DoEvents statements or other delaying measures in the code. But I've no idea how Excel handles things; it's probably worth asking in an Excel or ODBC forum (there are one or two Access ODBC newsgroups).
