Hi,

I have an Access DB that was created using Access 2000. The db has a form which displays one record from a table. If I select "File/Send To", select a file format and then a recipient, my data is attached to an email and when I get the email and open the attachment in Word 2000 the data appears fine. If I try the same thing on a computer using Access 2002 and Word 2002 the data headings are there, but there is no data.

Any ideas why????

thanks,

—

Phil
