> We just converted our 97 Access databases to Access 2003. The project went well with only some small code changes. One that has become larger over time
> is...
> we import XML files into the databases. In the 97 version, when the file was imported, the Date/Time datatype field only created a time. NO date. Which is what we wanted. Now with Access 2003, every file imported since the conversion has both. Some of our duplicate queries need that field with only the time, and now with the date it gives us results we don't want.
>
> The files are imported by a windows service we had written. The service extracts the info from the XML and inserts it in to our databases.
>
> Even with the the date hidden by the "Medium Time" setting in Access 2003, our queries still know a date is in the field and return false results!?
>
