Hi Rick,

I thought there'd be an issue with my explanation. (it's rather imperfect but I was in a time bind)

I'd copied the back-end of the database separately from the front-end. Unknowingly, the front-end was still linked to the back-end in the original location. I corrected this, updating the back-end links in the front-end in the Link Manager. At this point, the "Second" database started working correctly because the links in the "Original" database had been corrected.

Thanks for your concern, and your incite.

Sincerely,
Blenvid

Hi Rick,

Your explanation of my situation is the second part of your description, except that I've checked the links with the "Linked Table Manager." They're correct.

Hi, and thanks for looking at my question,

I have 2 databases, I'll call them the Original and the Second.
The
Second database has a few linked tables from the Original
database.

Re: tables that are linked are not getting updated

For some reason, when I update information in the Original table , it doesn't update the info. in the linked Second table.

I know that you're able to copy tables, and that wasn't done here. I created linked tables by going to File/Get External Data/Link Tables. Also, I've verified the links are correct in the "Linked Table Manager."

Does anyone know why my linked tables aren't getting updated?

Thanks so much.

-Blenvid

If you mean you have the link open as a datasheet and then make a change in the other file then you will not see that change unless you close the datasheet for the link and reopen it. If you mean you don't see the change even after doing that then the link is not pointing at the table you think it is.
