Hi,

I have an access database with a table linked to an external text file. Occasionally the location of the database and the text file change (but are always in the same directory). Is there a way to have the location of the external text file be a relative, rather than absolute path (to be .\textfile.txt rather than C:\dir\textfile.txt)?

Any advice that can be provided would be greatly appreciated/

Best wishes,

George Hadley
