Hi Michael,

Probably you need to re-register ACCWIZ.DLL.

If after that the import wizard still isn't working, re-register the following files

msexcl40.dll (Excel)

msxbse40.dll (dBase)

mspdox40.dll (Paradox)

mstext40.dll (Text, CSV, tab-delimited))

In Access 97, the filenames contain 35 instead of 40.

To re-register a DLL file,

- 1) Locate it (usually all these are in the Windows\System32 or WINNT\System32 folder.
- 2) Locate the file regsvr32.exe.
- 3) Drag the DLL file's icon onto the regsvr32.exe icon.

I've done this many times and suddenly I cannot export a query in datasheet view to a text file. I have the latest jet updates. The original database was 2000 format. The wizard is not working even after converting the database to 2003 format. When I run the query and open the export wizard, the window is blank. Security is set to low. I can select all and paste into an Excel sheet as a workaround, but this one has me stumped. Thoughts?
