Arvin Meyer has a downloadable sample ("EmailSenate" for Access 97, "EmailSenate2K" for Access 2000 and newer) at <http://www.datastrat.com/DataStrat2.html>

If I have a table that has all of the e-mail addresses for people who want to be on my mailing list, can I use Access to CALL Outlook to send an e-mail to all those people? Can I export the mailing list to a comma delimited list so I can just paste that list into my Outlook? I'd really RATHER have Access do it all for me though.
