You need to use ADOX library. See this link (watch for linewrapping) for an earlier post about how to do this:

http://groups.google.com/group/microsoft.public.access.developers.toolkitode/browse_frm/thread/9ac403962a86c8cb/

Ken,
Thank you so much. Just out of curiosity, can this be done in ADO?
Thanks
again,
Debbie

General code to loop through tables:

```
Dim dbs As DAO.Database
Dim tdf As DAO.TableDef
Set dbs = CurrentDb
For Each tdf in dbs.TableDefs
' code here to look at tdf object's properties, etc.
Next tdf
dbs.Close
Set dbs = Nothing
```

Hello,
I need to programatically import all the tables from one
Access
database
to
another Access database. I know how to use the Transfer
Database
command
but
I do not know how to loop through all the tables in the
dataabase that
I
want
to import from. Can anyone give me an example of how to
do that part
of
it?
Thanks very much.
Debbie
