I recently developed 3 new forms for my Access 2000 front end and wanted to add one of them to my toolbar. When I went to use the Customize and selected "All Forms", for some reason, the new forms were not in the list of forms in the right-hand panel. The other 100 or so forms all seemed to be there.

I am absolutely stumped. I have Compacted & repaired the front end, closed out of Access and opened the DB over and over again and I cannot get the forms to show up in the Customize window. I have examined every property I can think of and can't find one that seems like it would control this. Any one ever seen this weirdness before? Any suggestions?

There is another phenomenon going on that I don't understand also. Perhaps it is related in some bizarre way, so I will mention it and maybe people can answer one or the other problem (both would be miraculous!). After opening (and closing) those new forms a number of times, the tables involved with the forms can no longer be opened in design view. I am the owner of all the tables and I am sure that I have closed all the forms and the only way to get access to the table design (aside from read-only) is to close the database and re-open it. However, I cannot reproduce the problem on purpose. When I am trying to make it happen, so I can maybe solve it, I keep opening and closing the forms and cannot make the tables lock up.

It is all very bizarre and confusing. Any insight or suggestions would be very much appreciated.

TIA,  
Christine
