Thank you!

>-----Original Message-----

>You can reset the properties on the forms using the "On
>Current" event. This event fires each time you move to
a

>new record. Check out "Order of Events" in the Help
file.

>>-----Original Message-----

>>Thanks Steve, I see how to fix that problem. Now for
>>another related issue-

>>If the user hits the EDIT button, this sets the
>>AllowEdits YES, and turns the screen red. Now what I
>>have discovered is that unless you actually change
>>something in the record there is no update, therefore
>the

>>switch isn't reset again to NO by the proc in

>>AfterUpdate. So for instance if you hit the EDIT
button,

>>then move to another record, you are still in the EDIT
>>mode. This also happens if you move to a different tab
>on

>>the form.

>>What I am trying to achieve is a method where each
>record

>>can only be edited one at a time, and only by a
>conscious

>>effort with the EDIT button, with fail safes if you
move

>>from record to record. We are a charity and our office
>>staff and volunteers have very limited knowledge of
>>databases. I have had many problems maintaining the
>>integrity of the tables because they type into the
wrong

>>fields or forget the procedures when using Find, and
>type

microsoft.public.access.forms: To Steve Schapel, another question?

>>*over the existing data.*

>>*Thanks so much for your help,*
