I am a relatively new learner in Access 2000. I need to put field lists (both label and text boxes) on a form, detached eventually. I used auto wizard to quickly do that. But the two are attached. Rather than cut and paste the label to un-attached the pair, is there a way to detach the label boxes from the text boxes as a group?

It will save me lots of time in typing and/or cutting and pasting. I was not able to find this discussion on record. My apology, if I missed it.

Thank you in advance for your advice.

.
