Bruce,

I have inherited a small system that was designed by someone who left no documentation and is no longer contactable.

The data that is displayed incorrectly is either shown as a null field or the value last entered in that field on the screen is shown (i.e. if a new was created or record was changed, then whatever was last entered on the screen on the form in this field, then this value is displayed for all records). NOTE – it is only display that is incorrect – the database remains correct. All fields concerned are Unbound fields that exist on other tables, except one field that exists on the table the form is based upon and is displayed as a combo box.

The custom "previous record" button has the following code :-

```
Private Sub cmdcalldetailprevious_Click()  
On Error GoTo Err_cmdcalldetailprevious_Click
```

```
DoCmd.GoToRecord , , acPrevious  
Me.Refresh
```

```
Exit_cmdcalldetailprevious_Click:  
Exit Sub
```

```
Err_cmdcalldetailprevious_Click:  
Select Case Err.Number  
Case Is = 2105  
Exit Sub  
Case Else  
MsgBox Err.Description  
Resume Exit_cmdcalldetailprevious_Click  
End Select  
End Sub
```

The "Next Button" is exactly the same except that word previous is

Re: Next & Previous buttons don't display data correctly in Access

replaced with the word next.

The custom print button is supposed to print of a report version of the form where the code is as follows :-

```
Private Sub cmdPrintCallDetail_Click()
On Error GoTo Err_cmdPrintCallDetail_Click

Dim stDocName As String

stDocName = "rptCallDetails"
DoCmd.OpenReport stDocName, acViewPreview, , "[ID]=[Forms]![frmMain]![ID]"

Exit_cmdPrintCallDetail_Click:
Exit Sub

Err_cmdPrintCallDetail_Click:
MsgBox Err.Description
Resume Exit_cmdPrintCallDetail_Click

End Sub
```

Would I be correct in thinking thta if the Form error is resolved, this would then be reflected in the print function too?  
FYI – if I take the Print Function from the tool bar then every record is printed, and again the fields mentioned before are incorrect.

I hope this answers all your questions and provides more clarification to my problem.

Your help is greatly appreciated,

regards,

C. Stanton
