This is neat, but it just creates images, so I might as well copy and paste from Excel or Word. This would be most helpful with text that is at some other angle than 0,90,180,270 (especially keeping the original labels there but invisible, so that it can be edited at any time).

I appreciate your help. They'll just have to suffer with text facing the other way. I've been the one concerned about the cosmetic; they might not even notice the difference.

Okay, I went to
<http://www.lebens.com/xrotatetext.htm>
for a full setup, and still couldn't install . . . probably because I
don't
have rights on my workstation.

So, is it possible for me to install this on another workstation, create
my

Re: Modifying Label Vertical Alignment

Access file, and bring it back to work and have the forms display properly,
or do the files have to reside in the same path? And, if so, would it be enough to specify a local path, so I could have the Access file opened from a batch file, and have the user copy the "control" files locally to a specified location upon opening?

So, I finally found how to arrange a label vertically (for those reading the post who don't know . . . in the properties, under the "Other" tab, set vertical to Yes). But, it is arranging it so that left-to-right reading is now up to down, with the top on the right side of the label. I want the reading order to be down to up, with the top being on the left side of the label object. How do I do this?
