When I try to use the wizard to put a command button on a form I get this error message:

Error accessing file. Network connection may have been lost.

It then wants to send an error report to Microsoft and shutdown Access. I have try everything to correct this problem and I need desperately to use this function. I have created macros to go around this problem, but I get the same results.

Any help would be appreciated.

I am running MS Access 2003 and had a trial version of 2007 that will do the same thing.

I run windows XP and have 1GB of RAM.
