First, always work on a copy of the database. Working on the original may make it impossible for a repair service to fix it.

Download a copy of JetComp.exe:

<http://support.microsoft.com/default.aspx?scid=kb:EN-US:273956>

Try backing up your forms as text with the undocumented SaveAsText LoadFromText functions:

<http://www.datastrat.com/Code/DocDatabase.txt>

Also have a look at the Microsoft KB article:

<http://support.microsoft.com/default.aspx?scid=kb:EN-US:209137>

Then have a look at Tony Toews' Access Corruption FAQ at:

<http://www.granite.ab.ca/access/corruptmdbs.htm>

for some suggestions. Unfortunately, some corruption cannot be fixed – you may need to create a new database, import what can be salvaged, and recreate the rest.

Although it's a paid service, Peter Miller does an outstanding job of saving corrupt databases. Try this URL:

<http://www.pksolutions.com>

MS Access 2003 SP2

Re: Corrupt Form

MDB file

The Record Source of my form is a SQL table. The form has 174 textboxes. Each textbox is bound to a column in the SQL table. The form has a filter and an Order By. Navigation Buttons are set to Yes.

When the form is opened the user can navigate through the rows in the table with the navigation buttons.

This form suddenly disconnected from the SQL table. No record appears when the form is opened. All the other forms in the mdb remain connected to their Record Sources.

I have tried:

Compact and Repair

I changed the Record Source to a query that includes all the columns of the table.

I opened another mdb file and imported the form into this file. Then I imported the form back into the original mdb.

The form still remains disconnected from the table.

I do not believe that a user accidentally opened the form in Design Mode and made a change.

I can open a new form and copy and paste all the text boxes from the original form. I set the Record Source, Filter, and Order By to agree with the original form. The new form connects to the table and behaves normally. We also keep a backup of this mdb and the form in the backup is connected to the Record Source so recovery was not an issue.

I would just like to know what happened to this form?

Thanks,

Wayne
