that's say I have a form, there are 10 fields in this form, how do I make user complete all the fields before exit the database, if user only enter 9 fields, the screen will popup a message like "can not exit unless all the fields are compete.." please help, many thanks.

Put code in the BeforeUpdate event of the Form to validate that none of the fields are empty or null, if any are, set the Cancel argument to True (cancels the update event), issue a MsgBox explaining why you are not allowing the update, and exit.
