HAS ANYONE OUT THERE HEARD ANYTHING FROM MS YET ABOUT HOW TO FIX THIS? I NEED HELP QUICK...WE HAVE BEEN HAVING SERIOUS PROBLEMS SINCE THURSDAY (9/27/03) WHEN OUR AUTOUPDATES INSTALLED OFFICE SP3...

"Karl" wrote:

Hi Lori,

I don't know, but it just started happening with the release of SP3. As Ken mentioned, they've had many users report it during the past week.

In my case, I have temporarily removed the formatting I had applied to the bound field, and it's working again now as it should.

You can see my thread "Microsoft Access Combobox with SP3" in this same forum.

Like you, I hope they fix it soon – but most likely it'll be included in the October "Patch Tuesday" release.

Have a nice day!

Karl,

Thanks so much for the response. Any idea how long they have been working on this problem? Just wondering if I should unistall Office 2003, reinstall and only go as far as SP2.

RE: Data not displaying in combo list box

Lori,

I also had the same problem and received this response from Ken Snell (MVP). My message is also shown here.

By: Ken Snell (MVP) In: microsoft.public.access.forms

By chance, the field to which the combo box is bound is a text field and has a Format property setting for the field in the table? If yes, this is a bug that has been reported by many ACCESS users during past week. MS is aware of the bug and is working on how to fix it.

I have an access database that contains a form with a ComboBox on it. That box is populated from a table in the database.

It has been working for many years now, but after the latest MS Update that applied Office SP3, the ComboBox is no longer populated – it's just a blank ComboBox.

I attempted to create a new ComboBox using the wizard, but got the same result.

Can anyone else confirm this and/or supply a possible solution?

Since installing Office Service Pack 3, my combo list boxes do not display properly. Some only have data in 1 of 2 columns displayed on the form, some have no data in either of the columns displayed on the form. However, when I go into design view and open the source table, the data is there....for some reason it is not displaying on the form. Have been using these same forms for 10 years. Must be a conflict with a security update?

Can anyone offer assistance?
