Loni,

I think I see the problem, as to why you're getting all records... even with a legitimate date range.

Your SQL....

```
WHERE (((tblTrips.TripDate)>=[Forms]![frmReportParameters]![StartDate] Or  
(tblTrips.TripDate)<=[Forms]![frmReportParameters]![EndDate]))
```

Should be...

```
WHERE (((tblTrips.TripDate)>=[Forms]![frmReportParameters]![StartDate] AND  
(tblTrips.TripDate)<=[Forms]![frmReportParameters]![EndDate]))
```

01/01/2011 passes your OR test, as it is > StartDate

01/01/1945 passes your OR test, as it is < EndDate

Your date MUST pass BOTH the > Start AND < EndDate criteria...

My form name is frmReportParameters. My field names are StartDate and EndDate.

My query criteria is as follows:

```
= [Forms]![frmReportParameters]![StartDate] Or  
<= [Forms]![frmReportParameters]![EndDate]
```

Yes, I am using legitimate date values. And when I bypassed the form and

Re: Report/Query not selecting specific records

supplied the dates directly to the query, I let the query prompt for the dates.

Just for your information, this is sql for that query:

```
SELECT Sum(tblTripDetails.Gallons) AS SumOfGallons,  
Sum(tblTripDetails.LegMiles) AS SumOfLegMiles, tblTripDetails.StateMiles  
FROM tblTrips INNER JOIN tblTripDetails ON tblTrips.TripID =  
tblTripDetails.TripID  
WHERE (((tblTrips.TripDate)>=[Forms]![frmReportParameters]![StartDate] Or  
(tblTrips.TripDate)<=[Forms]![frmReportParameters]![EndDate]))  
GROUP BY tblTripDetails.StateMiles  
ORDER BY tblTripDetails.StateMiles;
```

Thanks for your help! BTW...Don't know if it matters, but I'm using
Access
2000

Loni,
.While your working on this problem, leave the form *Open and
Visible.*
.The report window should open on top of the form, and when closed,
the
form is again
.What is your form name... and your form field names?
.Please show (copy and paste) your query criteria "exactly" as you
have
it...

Also, I'm assuming you're entering legitimate date values in m/d/yy or
mm/dd/yy format on the form.

In troubleshooting the problem, I opened the query and
supplied the
correct dates and it still returned all records.

That's always a good idea...
Did you let the query prompt you for both dates, or did you hard wire
two
dates in the criteria?

If the query results won't respond to two legitimate date parameters,
then the problem must lie in the query itself.

That is the way I have it set up. The form is a dialog form that an okay button sets the form's visible property to false and opens the report. The report is based on a query and the date criteria comes from the parameters form. In troubleshooting the problem, I opened the query and supplied the correct dates and it still returned all records.

"Al Campagna" wrote:

Loni,
Several ways to do that...

If your dialog form was called frmDialog, and on that form, there were two unbound text controls, StartDate and End Date then...

In the query behind your report, have it look to the open form (form must remain open during report) to create a criteria against your report's date field.

Between Forms!frmDialog!StartDate AND Forms!frmDialog!EndDate

I have a database for tracking miles traveled and fuel purchased in each state. I have a report based on a query to total miles and gallons for each state in a quarter. Last quarter, the report worked perfectly. This quarter, for some reason, it's bringing in all records that have ever been entered instead of just the previous quarter's records. The only difference is that I changed the way the report opens. It used to required entering the beginning and ending dates multiple time. So, I created a form from which to pull the starting and ending date. I have opened the query on which the report is based and from there, input the dates in three different formats: 7/01, 7/01/07, 7/01/2007, etc, and it is still pulling all records. Please give me an idea on how to fix this!! I have a deadline

Re: Report/Query not selecting specific records

on doing my
quarterly
reports & I don't want to
have to think about figuring
all of this
manually.
That will take till next year
this time!!
Thank you for sharing your
wisdom!
