Tony Toews has a page about Access-based accounting systems at <http://www.granite.ab.ca/accsacct.htm>

I'm not sure about MS Accounting 2008, but I'm pretty sure that there are ODBC drivers available for QuickBooks. If you have the appropriate ODBC drivers loaded, you'll be able to get at the data from Access.

Hello all I have been working on a database for are small retail Tile company (we do everything by pen and paper now). I have been able to setup a working Orders/Invoice table and forms, CreditMemo table and forms, and PurchaseOrder table and forms all based on the Northwind Sample Database. "Thanks to all the help here". I have been searching for a sample database with accounting. With A/R, A/P, Billing Statements and so on. I am not a programmer or accountant so the chance of me doing something wrong is pretty good. I am hoping that someone has a add-in MsAccess database for sale that would link to my tables and do the accounting process. I have looked at Ms Accounting 2008 and QuickBooks 2008 no way to link the tables to the programs I can see. Any help or suggestions welcome.

Thank in Advance
