Your calculation should be:

$=[\text{Grand Total}] - ([\text{Grand Total}] * [\text{Deduction}])$

Dear users,  
I am stuck with a very simple problem but I really don't know how to solve it,  
I have the bound Control Box which showing the Grand Total of the amount in  
an invoice, and the format for this control is "Currency"  
I have another Control Box which is showing the percentage of deduction from  
the Grand Total.  
ok now in the Third Control box i want to show the Net Amount which means  
Grand Total minus deduction percentage,  
Grand Total = 739.20  
Deduction = 5.303%  
Net Total should be = 700  
in the Net Total I create unbound box and I write =  $[\text{GrandTotal}] - [\text{Deduction}]$   
what I am getting is 739.147, I know the way I am writing the code is the  
same way I do it using a calculator and I know there is a very simple way to  
write the code by access, so kindly help me. thanks a lot.
