Hi Joe,

you're welcome and thank you for taking time to explain. Out of curiosity, what type of work does she do?

Blind people using Access is a thought that has not occurred to me. I would be interested in her feedback to this document:

Access Basics

8-part free tutorial that covers essentials in Access

Hi Crystal

She has a Notebook with a software that follow all the things she does.

The software reads the word where the cursor is, or read the message box text, or the propertie where the cursor is and "tells" her through a headphone.

I could see her working very fast, better than some non-blind students (there were another 12 students).

The software allows her to map some toolbar icon and then she can use it.

But this didn't work with the Tool Box in the form design mode.

I was applying what we call an Advanced Access Course, that presents Action Queries, SQL

Re: Inserting Controls with Keyboard

queries, Macros, Security (it was Access 2003), Menu and Tool Bar customization, Controle Menu Form and VBA introduction.

She could follow all the themes, except Menu and Tool Bar customization, for the reason I've already explained.

She told me that she just uses queries in her activities in the office.

Your tip was a good idea.

Thanks for your help.

Joe

Hi Joe,

I admire you for having the kind of patience you must possess. In all honestly, I do not think it is possible for a blind person to design a form in Access from scratch (they could probably use a form wizard) -- but then I have no idea what kind of equipment you have to enable her to "see"

The best thing I can think to do is to create a form with each type of control that she can switch to -- and select what she wants, then copy and paste ... but that is a tall order for a beginner! She would need to understand the properties and how to change them.

Can you describe the special equipment that she has to help her?

Warm Regards,
Crystal

Hi Crystal

I am teaching students to use MS Access.

One of them is a blind girl.

Her computer has some resources to help her work.
However, this kind of resource doesn't work as good as it
should for drawing controls in a form.

So I am doing this research to solve her problem.

Thanks.

Joe

Hi Joe,

not that I know of ... unless you have all
control types on another form you can
switch to and copy/paste ... but why do you
want to do this?

Warm Regards,
Crystal

Re: Inserting Controls with Keyboard

Joe wrote:

Hi

Is it possible to insert a Command Button, a Frame, a ComboBox, or any control from the ToolBox Toolbar without the mouse, just using the keyboard.

How is it possible, or where can I find a guidance.

Thank's in advance.

Joe
