Mike,

Like a rock!!!

1. Are you using Access 2007? Maybe you said but I missed that. In earlier versions to get to design mode you clicked a blue triangle looking button. If Access 2007, then you probably have to UNGroup them to get them to move independently of each other. I THINK this can be done by right-clicking on one of the boxes and select 'ungroup'. If that doesn't work I'll have to open my Access 2007 and have a look. Also, if you are using Datasheet View then they will always be side-by-side no matter where you move them.

2. Then by all means add the button to add a new record. You know your users better than anyone.

Gina,

hope you slept well:)

Go into design mode of the form (the little blue triangle and move the fields around/over/up/down...

–when i go into design mode, the cbo's show up as independent boxes inside the subform which i can move all around (no blue triangles?) but no matter they still show up as side-by-side columns in form view.

–also i think there will be less incorrect entries if i add a cmdBtn to allow user(teacher) to confirm selection. else, as soon as a class is

Re: purpose of subform?

selected its written to tblStudentSubject which i believe will lead to
alot
of invalid entries. is that difficult to change?
