I'm using the folto prevent users from 'tabbing' out of a field.

```
Private Sub ControlName_KeyDown(KeyCode As Integer, Shift As Integer)
If KeyCode = vbKeyTab And Shift = 0 Then
KeyCode = 0
End If
End Sub
```

Can I do the same for the Enter-button?

```
If KeyCode = vbKeyReturn Then
KeyCode =0
End if
doesn't seem to work?
```

In the database options I've set the database to move to the next field on Enter – does this complicate it?
Could it be something with the previewing of the keystrokes in field/form?
Thanks for your help.
