Hi Mark,

I think the best way to do this is by using code in the form's Load event procedure to modify its RecordSource. Assuming the current recordsource is "MyQuery", you'd need something like this:

Dim strRepLogin As String

```
strRepLogin = DLookup("[rep number]", "Debt Advisors", _  
"[username] = " & reptime & """)
```

```
Me.RecordSource = "SELECT * FROM MyQuery WHERE [salesperson]= " _  
& strRepLogin & "";
```
