Thank you very much for your wise advice, Mr Welch.

This is my first time using Newsgroup. I am amazed there is really kind and wise people who will be so generous to volunteer knowledge to inexperienced user like me

I have had a separate table similar to LeaveEvents to track the period & no. of days. I have a form for this LeaveEvents. I want the form to provide

- (1) reference of balance of leaves,
- (2) sum no. of leave days taken YTD,
- (3) show users no. of days left, and
- (4) update end balance in (3) above to the balance of leave in another Master Table.

With your wise enlightenment, I think I will create

- (1) a MasterTable Form,
- (2) make LeaveEvent table as subform,
- (3) do the calculation per your advice
- (4) do a update query to update the end balance back to the Master Table

Hope you would not mind to advice additional guidance.

—

Thanks a million for your time and expert advice :-)

Jaylin
