Roger Carlson wrote:

If ServiceN is a field or variable, then list it without the quotes:

```
DoCmd.OpenForm "frmStaff_Entry", , , "Name = " & Chr(34) & Me.Name &  
Chr(34), , , ServiceN
```

Right now, you are passing it the literal string "ServiceN". Without the quotes, it will pass the value of the variable.

Just as a followup, 'Name' is a reserved word in Access. You shouldn't name (no pun intended) any of your fields or any other object with a reserved word. Sometimes it'll work, sometimes it won't. It really depends on what the code is trying to do.

That's probably not the problem here, but you should make the correction for the future anyway.

Here's a list of all the reserved words: <http://support.microsoft.com/kb/q286335/>
