Hi,

Trouble's back

Still can't get this right.

Currently I have:

```
txtCurrent = "F" & Fieldss
```

```
Forms!tblExcel_Check.txtCurrent.FormatConditions.Add acExpression,  
acEqual, "[GroupOrderNo]=1",  
Forms!tblExcel_Check.txtCurrent.FormatConditions.Item(0).BackColor =  
15592886
```

I have a definition problem.

Can you be good enough to correct it for me.

This example adds a format condition to the text box named Amount on Form1, to show negative values in red:

```
With Forms!Form1.Amount.FormatConditions  
.Add acFieldValue, acLessThan, 0  
.Item(.Count - 1).ForeColor = vbRed  
End With
```

Re: Using VBA need to add a text box to a form

Sorry Alan,

Just a bit thick on this point. how do a do add method if possible give an example

Regards.

Trev.

ps I am always glad when you reply as you always give the best, most correct and to the point answers.

"Allen Browne" wrote:

If the control is a TextBox or ComboBox, you can use the Add method of its FormatConditions collection to add up to 3 format conditions.

Thanks for that.

How for the follow up.

Is it possible at the time of adding the item to put a conditional format in place.

If so, How.

If not how do I get around it.

Thanks

Trev

"Allen Browne" wrote:

You cannot do this while the form is in use, so this technique is not suitable for any database

Re: Using VBA need to add a text box to a form

where you plan to release an MDE for users.

If you are designing some kind of wizard/tool for development purposes, you can create a text box like this (assuming Form1 is open in design view):

```
Dim txt As TextBox
Set txt =
CreateControl("Form1",
acTextBox, acDetail, , , _
1440, 1440, 1440, 285)
txt.Name =
"MyNewControl"
```

Hi,

Thanks in advance.

Using VBA
I want to a
boxes to a
form.

I am ok
with the
loop but
just how do
you add a
textbox to a
form
using
code.
