Daniel,

Thanks so much for the response. I understand how that works, but now I've run into a problem I think with the hyperlink. The way the address is displayed in the hyperlink is with a + between each word. So 111 + Pheasant + Lane .. etc. My txtaddress only shows 111 Pheasant Lane.

So the URL would read

<http://maps.google.com/maps?q=111 Pheasant Lane+txtcity+txtstate+txtzip>. Any way to insert + into the spaces of the address so that it comes out right? Or any way to display this url into another textbox? I tried to make a textbox with =[myGoogleMapURL] in it and I get a #Name.

My code:

```
Private Sub CmdGet_click()
```

```
Dim strAdd As String  
Dim strCity As String  
Dim strState As String  
Dim strZip As String  
Dim MyGoogleMapURL As String  
Dim strHypPre As String 'Google prefix url  
Dim strHypCri As String
```

```
strAdd = Me.txtaddress  
strCity = Me.txtcity  
strState = Me.txtstate  
strZip = Me.txtzip
```

```
strHypPre = "http://maps.google.com/maps?q=  
strHypCri = strAdd & "+" & strCity & "+" & strState & "+" & strZip  
MyGoogleMapURL = strHypPre & strHypCri  
End Sub
```

Re: Passing textbox data into String for URL

This is on the patient subform of the tabbed record. And then on the map tab, I have a button to pass this string to the webbrowser.

Private Sub cmdgotourl\_Click()  
Me.WebBrowser0.Navigate MyGoogleMapURL  
End Sub

Again, thanks for your help!

.
