How about importing it and then executing it?

Bob

"Rob" <[Rob@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx](mailto:Rob@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx)> wrote in message

I have a split database, front end/back end.  
The front end contains the form/reports/modules/queries etc.  
The back end the tables and data.  
The front end is distributed in mde format (so vba and design mode are non accessible).  
I would like users to be able to see and freely modify the report design, but not the forms design.  
So i thought: maybe store the reports in a separate (open) mdb.

But can anyone tell me if one can call a report in a mdb from a form stored in another mde? And parsing filters from the form to the report?

Thanks for any reply,  
Rob
