Still? I have gotten no suggestions as to what could be my issue.

"MikeJohnB" wrote:

Have you still got the same issue with the code?

Consider providing some feed back to the response you have recieved.

Kindest Regards Mike B

"redFred" wrote:

Yes, I am aware of that.

"MikeJohnB" wrote:

By the way, Now() will give you both a date and time stamp,  
if you only want  
a date, then = Date() only returns the date portion?

Kindest regards

Cannot see anything else wrong with your code, let me know  
how you get on?????

"redFred" wrote:

Yes, thanks.

```
Forms![1frmclient].Form!txtLastUpdate  
= Now
```

Like I stated...in any event  
as the only code.

"MikeJohnB" wrote:

Can you  
post the  
code that is  
being used  
to perform  
the update?

```
Forms!MainFormName.UpdateControlName  
= ??????
```

Kindest  
Regards

Happy  
Holidays  
and  
thanks  
for  
helping.

I  
have  
a  
main  
form  
that  
has  
a  
control  
to  
record  
last  
update  
to  
it  
or  
another  
form/subform.

RE: Cannot set value via event

RE: Cannot set value via event

[frmClient]-user  
clicks  
button  
to  
display  
[frmClientUpdate].  
[frmClientUpdate]-popup,  
not  
subform.  
[frmClientUpdate]![subforms]  
-  
contain  
controls,bound,  
to  
update  
data.  
There  
are  
several,  
behavior  
is  
common  
to  
all.

I  
am  
unable  
due  
to  
the  
error  
2448  
to  
update  
the  
last  
update  
control  
on  
[frmClient]  
when  
I  
make  
a  
change  
to  
a  
control  
on

RE: Cannot set value via event

RE: Cannot set value via event

[frmClientUpdate]![subform].

[frmClient]

last

update

control

works

fine

when

tested

at

[frmClient]

and

[frmClientUpdate]

and

the

[frmClientUpdate]![subform]

source

object

form.

However,

when

I

add

the

same

updating

code

to

[frmClientUpdate]![subform]

event

(any

subform,

any

event)

I

get

runtime

error.

I

am

attempting

to

use

the

BeforeUpdate

event

to

test

Value

RE: Cannot set value via event

RE: Cannot set value via event

vs  
OldValue.

The  
subform's  
form  
open  
event  
will  
update  
[frmClient]  
last  
update  
correctly.  
Any  
subform's  
control,  
any  
event  
will  
fail  
2448  
cannot  
update.

Does  
anyone  
see  
a  
solution?  
I  
have  
Compacted/Repaired,  
rebuilt  
and  
no  
joy.  
I  
am  
at  
a  
loss.

Thanks.  
redFred
