The main form
[Main Record]
has on it a subform named LineItemSubformQuery

if i want to change the subform's enabled property from an afterupdate property of a field on the main form, how do i reference that?

i'd also like to change the subform's line's to be colored light gray, as if grayed out, because apparently unlike other controls that are not enabled, its color does not change when its not enabled.

Help please?

.
