Without knowing what line 35 in updateCalendar_script.asp is, it's pretty hard to suggest anything.

Does the application work otherwise? Are you able to apply any updates to the database? If not, does the security context running the ASP page (usually IUSR_<machinename>) have the necessary permissions (RWXD) on the folder where the MDB file is located?

I am getting the following error when trying to connect to my access database:

Technical Information (for support personnel)

Error Type:
Microsoft JET Database Engine (0x80004005)
Operation must use an updateable query.
/saveyonce/calendar/updateCalendar_script.asp, line 35

Browser Type:
Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.1.4322; .NET CLR 2.0.50727; InfoPath.1)

Page:
POST 62 bytes to /saveyonce/calendar/updateCalendar_script.asp

POST Data:
calendarText=Darlene+-+color+10%3A00¤tDate=10%2F7%2F2006

More information:

Microsoft Support

I am running windows xp sp2, Office 2003. I have down loaded all updates for windows and office, made sure the folders are not read only. made sure the database is 2002–2003, went to %systemroot%\Program Files\Common Files\System\Ole db and typed regsvr32 sqloledb.dll.

I do not know what else to do, and I am trying to get a web site done.

Also

I am using frontpage 2003, why is it my .asp files do not run in any other browser. When creating a web site I test the most important browsers. In this case it wants to open or save the file.

Thank you

Dee
