i need help badly – im pretty new to this and i have spent ages doing this db for work. I dont know whether i need to adjust it or just plain scrap it. Its for a garage – i have a customer details table and have a form made from the same fields (i do most of my inputting onto form) Table and form have same name "Mot Reminders1". I have 4 tabs on the form – Cust details – Mot – Service – Winter chk The fields are as follows– AutoNo (primary) – CustName – Address – Tel – Vehicle descrip – Vehicle reg – date mot passed – date mot due – mot remind date – service due – service remind date – winter chk due – winter chk date. I have a report – winter chk, which when i open i have it set to print only 1 record per page. I also have a switchboard with links to letters in word and advert in publisher. Thats the basic basis of my database. Im pulling my hair out as i need to have a command button on switchboard which will enable me to do a find (not the access find/replace) but a gray type parimeter box in which i can type either the name or vehicle reg – which then will open that record in form. Then on the form itself i wanted a command button which will take me to the report and insert only the record that i found. from there i wanted a print button to print the current report page. I have read every thread in every catagory – i have scoped a guys website who regulary replies in here – alan browne – i have looked through the access online help pages and the training and also asked the office assistant. I have no problem in getting the button on – im having the problem with the on click expression – iv never done that in vb before – and i dont know where the code should go – please please could someone type the code i need – if not for both buttons then just for the one that goes on form and opens report with the current record, i know you have a policy in here that if you do it for me i wont bother to learn but belive me i leant a lot over the past week of trying to find this – but cannot grasp this vb thing. Im even bringing it home with me now as i am so desperate to get this db finished. Forever grateful if you could help me

.
