I am new to access and need to know if there is an easy way (or if its even possible) to do the following.

Table/Fields

Students/ Student ID, First name, last name....

Tests/ Student ID, Test Name, Test Score, Test Date.

I need to be able to find students based on their record of tests. For example I need to find each student who got above a certain score on 3 or more tests consecutively and within a certain time period.

In one to many relationships I have no idea how to find the one by querying the many related to it. I am new to access and any help would be appreciated greatly.

Thanks

Chaos
