For a site, I plan on using ASP.NET 3.5 tied to Access 2K db because of licensing reasons.

What tools could I use to remotely manage this DB ? Could it be accessed via a simple ODBC connection? What alternatives do exist (I have read some posts warning against ADP)? If ODBC is adequate, I presume a simple Access client app that resides on my local PC will be ok. Are there any networking issues to be aware of? Thanks for any pointers.
