Oops forgot one thing. Why running VBE? I'm originally intending to write this utilizing ADO so I will need to use the VB editor for testing purposes. I may need to made modifications later in case the project specs change.

pcman wrote:

Steve:

Sorry I was pulled away on other projects. To answer your questions:

The cursor was in the sub area being tested. When I attempt to compile the project either using the menu command or icon both are grayed out. In the options pop-up menu the the "Compile" section has already checked off Compile On Demand and Background Compile checked off. When clicking on Run>Run Sub>UserForm (F5) the Macros menu pops up.

I started a new project for testing purposes. I created very simple one just have two text boxes and three command buttons (next rec, previous rec, quit --- to end the program). I created the whole project using the wizard. However, again when I run this newly created project I have the the prompt coming up asking for the macro to run. I uninstalled the whole MS Office program and reinstalled it thinking that whatever was in there would be gone. But this did not materialize as I would have hoped. In my Available References I have:

Visual Basic for Applications  
Microsoft Access 11.0 Object Library  
OLE Automation  
Microsoft DAO 3.6 Object Library  
Microsoft ActiveX data Objects 2.1 Library  
(All of the above is for this testing program only)

Where do I go from here? Thanks.

Pcman,

Re: Macro prompt

grayed out. Also another piece of info, this version of Access  
is still  
using SP1. Thanks.
