Is the code I can write to disconnect/unlink linked tables

1. I have an Access 2000 database that has over 65 linked SQL tables.
2. I need to be able to switch between the Live data tables and Test data tables
3. Using the Linked table manager gives me an error because some of the links are to Views
4. Currently, I have to delete each table by hand (which is a really big pain in the ...)
5. I have the code to rename the tables since they come in with the dbo\_ prefix. Maybe there is a way to modify this code to loop through and delete the table (but only if it is a linked table) I also have local tables that should not be deleted

-----  
Public Function RenameTablesdbo()

Dim db As DAO.Database

Dim tbl As DAO.TableDef

Set db = CurrentDb()

For Each tbl In db.TableDefs

    If Left\$(tbl.Name, 4) = "dbo\_" Then

        tbl.Name = Mid\$(tbl.Name, 5)

    End If

Next tbl

End Function  
-----

All suggestions will be greatly appreciated

Thank You
